

$\|g(t_k)\|$

Let $A_{mj} = \{ \exists t \in B_{mj} : f(t) = u, g(t) \in \partial B \}$

$\int 1[\partial B + B(\sqrt{n} C_\varepsilon d_m)] p_h(t) dt$

$\int 1[f \in B(\sqrt{n} C_\varepsilon d_m)]$

$\partial B \cap [-h, h]^n$ then okay!

$P(f(t) = u,$

take $P(\cup \partial B$

a) $\partial B = \cup \partial B \cap [-h, h]^n$
etc

so prob ok available \Rightarrow
